

STEP PROBE

A “Step” or “Hat” probe indicates the concept of using a “step” to control the distance of probe tip entry into a wire harness connector housing, thus allowing electrical contact to be made to a terminal without actually entering the terminal. The critical areas of the connector terminal remain virgin to assure proper conductivity and intermetallic relationships once the harness is assembled into its end use.

Depending on the customer preference, Step Probes can be either replaceable or non-replaceable. All replaceable Step Probes feature a Pylon Bend, to prevent walkout of the probes from the receptacle. Non-replaceable probes have a press ring, which holds the probe in place and keeps it from walking out of the mounting bracket.

Though used almost exclusively in the wire harness testing industry they can also be used in ICT / FCT testing. ECT offers a variety of pitches and step depths to accommodate most harness test requirements.

Order Code	Preload	Rec. Travel
Standard	1.5 (43)	2.9 (82)

Electrical (Static Conditions)

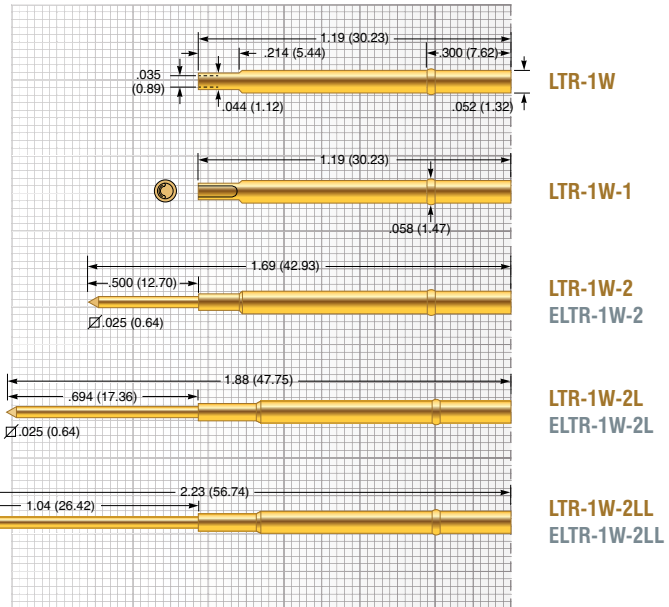

Current Rating: 3 amps
 Average Probe Resistance: <35 mOhms

Materials and Finishes

Plunger: Heat-treated BeCu, Gold plated over hard Nickel or Rhodium plated
 Barrel: Work-hardened Phosphorous Bronze, Gold plated over hard Nickel
 Spring: Stainless Steel, Silver plated

Receptacle

Hole diameter: Ø .053 to .055 (1.35 to 1.40)
 Suggested drill: #54 or 1.40 mm
 Material
 • LTR Housing: Work-hardened Nickel Silver, Gold plated over hard Nickel
 • ELTR Housing: Nickel Silver, unplated
 Post: Phosphorous Bronze, Gold plated
